

Postdoctoral position in ion channel function

A postdoctoral position, funded by the Swiss National Science Foundation, is available in the laboratory of Stephan Kellenberger at the Department of biomedical Sciences (DSB) of the University of Lausanne. Our laboratory investigates the pH-sensing ion channels "acid-sensing ion channels"(ASICs), with the aim of understanding their activation mechanism on a molecular level. ASICs are neuronal ion channels involved in pain sensation, the expression of fear, and neurodegeneration after ischemia (for review see Kellenberger and Schild, Pharmacol Rev 67: 1-35, 2015). The postdoctoral fellow will study conformational changes in ASICs. To this end, she/he will use electrophysiological and fluorescent approaches in recombinantly expressed ASICs.

Your profile

We are looking for a talented and motivated postdoctoral researcher. Applicants need to have a PhD in life sciences or a related domain. They must have relevant experience with electrophysiology and fluorescence approaches. Ideally, the candidate has experience with voltage-clamp fluorometry. Additional desired qualifications are a basic knowledge of molecular biology and biochemistry.

What we offer

We are a small, dynamic and motivated team. The position is for 2 years, with an initial, renewable contract of 1 year. The DSB, with 18 research teams, offers a stimulating and competitive research environment in modern biology with multidisciplinary expertise (www.unil.ch/dsb). Lausanne, with its university and the EPFL is a center of life science research.

Beginning: Fall 2022

Applications, preferentially by e-mail, are invited in the form of a motivation letter, a curriculum vitae, a brief description of research experience and doctoral thesis, and the names and addresses of three academic references, before June 20, 2022.

Contact address for inquiries and for submission of applications: Dr. Stephan Kellenberger PD-MER, Département de Sciences biomédicales, Université de Lausanne, Rue du Bugnon 27, CH-1011 Lausanne, tel. +4121 692 5422, Stephan.Kellenberger@unil.ch, <https://wp.unil.ch/kellenberger-lab/>
